Build a Virtual Private Cloud (VPC)

Courage Dei

Create VPC [Info](#)

A VPC is an isolated portion of the AWS Cloud populated by AWS objects, such as Amazon EC2 instances.

VPC settings

Resources to create [Info](#)

Create only the VPC resource or the VPC and other networking resources.

☒ VPC only ☐ VPC and more

Name tag - *optional*

Creates a tag with a key of 'Name' and a value that you specify.

NextWork VPC

IPv4 CIDR block [Info](#)

☒ IPv4 CIDR manual input
☐ IPAM-allocated IPv4 CIDR block

IPv4 CIDR

10.0.0.0/16

CIDR block size must be between /16 and /28.

IPv6 CIDR block [Info](#)

☒ No IPv6 CIDR block
☐ IPAM-allocated IPv6 CIDR block
☐ Amazon-provided IPv6 CIDR block
☐ IPv6 CIDR owned by me

Tenancy [Info](#)

Default

Introducing Today's Project!

What is Amazon VPC?

Amazon VPC is an isolated kind of like a folder for you and it is useful because it isolates all the resouxces you use from other users resources

How I used Amazon VPC in this project

In today's project, I used Amazon VPC to create a subnet and linked the vpc to an IG so it can have access to the internet

One thing I didn't expect in this project was...

One thing I didn't expect in this project was how easy it was to complete

This project took me...

This project took me about 15 minutes to do

Virtual Private Clouds (VPCs)

VPCs are like an organized folder for everyone, private to only you

There was already a default VPC in my account ever since my AWS account was created. This is because some of the service i use such as ec2 need to run on a vpc which wont be possible if the default vpc is absent

To set up my VPC, I had to define an IPv4 CIDR block, which is the block of ip address i will assign to my vpc

Create VPC [Info](#)

A VPC is an isolated portion of the AWS Cloud populated by AWS objects, such as Amazon EC2 instances.

Subnets

Subnets are small cities in my country There are already subnets existing in my account, one for every availability zone in my in my region

Once I created my subnet, I enabled auto assign public ipv4 address, This setting makes sure that all my resourxs have a public address so that they can access the internet

The difference between public and private subnets are the public has direct access to the internet but the private only access resourcs it need in the public subnet dose not mean it is connected to t For a subnet to be considered public, it has to...

You have successfully changed subnet settings:

- Enable auto-assign public IPv4 address

Subnets (1/1) [Info](#)

Internet gateways

Internet gateways are kind of like bridges that help our resources access the internet from the vpc

Attaching an internet gateway to a VPC means my vpc can access the internet If I missed this step my vpc will be private

Internet gateway igw-0bde3842c018f23b7 successfully attached to vpc-0dd420486cfd46ca7

igw-0bde3842c018f23b7 / NextWork IG
